

Hydraulic Technology, Inc. designs and manufactures aircraft ground support equipment, hydrostatic test systems and automotive shop maintenance equipment for military, aerospace and industrial customers.

About Us

Since 1967, Hydraulic Technology has been in the business of designing and manufacturing aircraft ground support equipment and a full line of hydrostatic testers and high pressure testing equipment to the U.S. Military, aerospace and industrial customers.

Learn More

Hydrostatic Testers

Hydraulic Technology has been manufacturing hydrostatic test equipment for the U.S. Military, aerospace and industrial sectors for over 25 years. These hydrostatic test systems are used for both high pressure proof testing and burst hydrostatic testing.

Learn More

Ground Support Equipment

We manufacture a variety of ground support equipment for military and aerospace applications including hydraulic servicing carts, tachometer indicator-generator test sets, turbine engine wash units and blowers for pneumatic lifting bags to name a few.

Automotive Testers

We manufacture radiator test stands for leak testing, flow testing and repairing radiators and heat exchangers for both the automotive and refrigeration industries. All our systems have been approved for U.S. Military service.
